

Independent Representation Opportunity

Meridian Putters, LLC

Started in 2021, Meridian Putters provides customers with a premium putter without the premium price. Our putters are cut from blocks of stainless steel using Five Axis CNC Machines. They are all manufactured in one piece, meaning no welding is involved. The putters can be coated in different colors, and we offer numerous face finish options that allow for easy customization. We also have the ability to laser engrave logos, images, or initials right in line with our manufacturing process. There is nothing “stock” about our offering.

Highlights of working with Meridian Putters:

Quality Design and Craftsmanship:

- Our engineers have extensive OEM and independent club design experience. You can feel confident about the quality of our putter and future designs.
- All putters are made on state of the art machinery that ensure a quality product every time.

Generous Commissions:

- We are looking for team members who want to be part of a dynamic organization. We are not looking to squeeze reps and haggle over percentages. As a representative, you bring us value. We want to make sure you are compensated fairly.

Marketing Materials and Samples:

- We will support and supply you with the tools and products you need to be successful and represent our organization. Our marketing materials will be updated regularly and we will provide samples for you to use in presentation if necessary.

Customer Support:

- We are a small organization, so when you call the shop, you will be talking to decision makers who can jump on and assist with any support items.

Be a part of a new company growing and looking to change the industry.
